

JG411A Gator Front Windshield

Peel away the film on the windshield and attach the two long clips to the side as shown. Make sure that the clips extend off the same way as the preinstalled clips. Do not push the clips in all the way, they may need to be adjusted to match your front support.

Mount the two bottom clips roughly 6" from the corner on the bottom of the windshield and push them all the way in. Make sure that the clips extend in the same direction as the other clips.

Remove the rest of the film and attach the windshield to the front support on your Gator, adjust clips on the side if necessary.

The windshield can also be folded down. The top lip of the windshield slides into the bottom clips which will hold it in place.

ALWAYS REMOVE THE WINDSHIELD BEFORE TRANSPORTATION
